waliFit

V1 — Complete Feature Specification

What ships at launch · What each feature unlocks in future releases

> *How to read this document: Every V1 feature is fully specified here. Where a feature connects to a future capability (V2, V2.5, or V3), a purple 🔮 tag shows exactly what gets unlocked later. V1 is complete and usable on its own — future releases deepen it.*

Core Loop

Train → Log → Progress → Compete → Repeat

12	3	5	2
Core Features	AI Capabilities	Social Features	Legal Requirements

SECTION A

AI & Coaching

The intelligence layer — Wali AI, onboarding, and the coaching relationship

Feature 1 Wali AI

The central AI coaching experience. Built on a Claude Sonnet + Gemini Flash hybrid — Claude for complex coaching, Gemini for fast, high-volume tasks.

Program Architect

- Generate 4–6 week training blocks from user goals, schedule, and equipment
- Support: strength, fat loss, muscle gain, hybrid performance, conditioning
- Adjust for training days, session length, and available equipment
- Beginner through advanced — plan difficulty calibrated to experience level
- Returns structured JSON plan mapped directly to calendar sessions

Daily Coach Chat

- Answer training, nutrition, and recovery questions
- Modify today's workout in real time
- Provide equipment substitutions and volume adjustments
- Complex questions → Claude Sonnet. Simple questions → Gemini Flash
- Full user context injected on every call: goals, recent workouts, current plan, nutrition averages

Workout Adjustment Engine

- Shorten or expand workout volume on request
- Substitute movements for missing equipment
- Switch between gym and home-friendly formats
- Lives inside Daily Coach Chat — no separate screen needed

Proactive Cold-Start Message

- Wali AI sends the first message — the user does not have to start the conversation
- Fires automatically when onboarding completes (1.5s delay via BullMQ)
- Personalised to the user's stated goal — always asks exactly one follow-up question
- Sets the coaching relationship tone from the first interaction

RAG Knowledge Base

- Every AI response is grounded in waliFit's vetted exercise, nutrition, and programming content
- Prevents hallucination — AI answers from your curated knowledge, not training data guesses
- Exercise library (800+ entries from wger open-source API) embedded at setup
- Programming principles (progressive overload, deload, conditioning zones) written manually
- Cost: ~$5/month at 1,000 users via pgvector on existing Railway PostgreSQL

🔮 **Unlocks in future release:** V2 — Nutrition AI (meal parsing, food rating, ingredient analysis). V2.5 — AI Program Evolution Engine (adaptive planning from workout history). V2.5 — Recovery & Deload suggestions from HRV data.

Feature 5 Onboarding & User Profile

Sets the foundation for all AI personalisation. Completable in under 3 minutes. Persistent progress means closing the app mid-onboarding never loses a step.

Goal & Training Setup

- Primary goal: strength, conditioning, fat loss, muscle gain, hybrid performance
- Experience level, available training days, session length, equipment
- Optional: body weight, dietary pattern, injuries or limitations

Units Preference

- kg or lbs selected in onboarding — affects the entire app immediately
- Database always stores in kg/metres — UI converts on display
- Changeable in Settings at any time
- Defaults to device locale (US → lbs, everywhere else → kg)

Daily Targets

- Daily protein target in grams — Wali AI suggests, user can override
- Daily water target in litres or fl oz — feeds the Vitality Tree hydration pillar

Onboarding Return Path

- onboardingComplete + onboardingStep fields on User model
- Each step saves to server immediately — never on final submit only
- App reopen routes directly to the incomplete step
- Optional steps (physical details, injuries) can be skipped without blocking progress

Multimodal Profile Import

- Optional: upload a screenshot from Hevy, Strava, MyFitnessPal, or Strong
- Gemini Vision API extracts: PRs, body weight, training frequency, goals, recent workouts
- Pre-fills onboarding fields — user reviews everything before confirming
- Full onboarding completable in under 60 seconds via import
- Skip button always visible — no friction for users who prefer manual entry

🔮 **Unlocks in future release:** V2 — Female Training Considerations (cycle phase tracking, phase-aware AI coaching). V2 — Progress & Analytics (strength trend charts, PR vault). V2 — Body Metrics (weight trend, measurements, progress photos).

SECTION B

Training Core

The Hybrid Performance Engine — workout and run logging, planning, and tools

Feature 2 Hybrid Performance Engine

The workout and training core. Every set, rep, and conditioning session logged here feeds the Vitality Tree, the streak, the PR feed, and Wali AI's coaching context.

Workout Logging

- Log strength sets: exercise, sets, reps, weight, RPE (Rate of Perceived Exertion)
- Log time-based and interval conditioning workouts
- Add notes per session
- Mark completion status — feeds Vitality Tree activity pillar
- All data timestamped and linked to calendar date

Custom Workout Builder

- Build workouts from scratch — exercises, sets, reps, rest, time intervals
- Create weekly splits and mix strength + conditioning
- Save, duplicate, and edit templates
- Assign plans to self — sessions appear on the calendar

AI-Generated Plan Editing

- Edit any exercise, set, or rep in a Wali AI-generated plan
- Ask Wali AI to revise a section ('make this more conditioning-focused')
- Combine manual programming with AI-generated blocks

Basic Exercise Library

- 800+ exercises from wger open-source database
- Search by name, category, or muscle group
- Movement type classification and targeted muscles
- Cached locally — works fully offline

Plate Math Calculator

- Enter target weight → get exact plate distribution
- Visual bar-loading guide
- Supports standard barbell formats
- kg and lbs display based on units preference

Interval & Conditioning Support

- Timed work/rest formats
- Rounds-based conditioning
- Basic HIIT logic

- Conditioning sessions logged in workout history

🔮 **Unlocks in future release:** V2 — RPE-Linked Rest Extension (AI suggests longer rest on high-effort sets). V2.5 — Conditioning Event Expansion (Hybrid Event Challenge Templates, improved interval builder). V3 — Bar Path Tracking, Velocity Loss Monitoring, AI Form Coach.

Feature 12 WaliRun

Running is native to waliFit. WaliRun extends the Hybrid Performance Engine to treat runs as a first-class session type — GPS tracking, standard race distances, auto PR detection, and run clubs via The Arena.

GPS Run Tracking (Foreground)

- Live GPS via expo-location — screen stays on during run
- Real-time: current pace, average pace, elapsed distance, elapsed time
- Audio cues at every km or mile split
- Route stored as polyline on WorkoutLog — displayed in post-run stats
- Fully offline — GPS is on-device, syncs on reconnect

Standard Distance Modes

- Distances: 1 mile, 2 mile, 3 mile, 2K, 5K — all always available
- Auto-stops when target distance is reached via GPS
- Metric and imperial pace always shown regardless of units preference
- Free Run mode also available (no target distance)

Individual Run Stats Report

- Appears immediately after every run — before the user does anything else
- Shows: distance, total time, average pace, fastest split, slowest split, splits chart
- PR delta: '+45s off your 5K PR' or 'NEW 5K BEST — 45s faster'
- Effort label: Easy / Moderate / Hard / Max
- Route map from GPS polyline
- One-tap shareable stats card (distance, time, pace, route thumbnail)
- All generated client-side — no extra API calls

Run Personal Records

- Stored via existing PRRecord schema — no new table
- exerciseName: '5K Run', unit: 'seconds'
- New PR triggers PR feed post, squad notification, tree milestone
- All-time bests per distance visible in Run Profile tab

Personal Run Stats (Solo)

- Weekly summary: total distance, total time, number of runs, avg pace trend
- Pace trend per distance — is your 5K pace improving month over month?
- No squad required — solo runners get full stats

🔮 **Unlocks in future release:** V2 — Background GPS (screen-off tracking). V2 — GPS pace trend charts in Performance Dashboard. V2.5 — Station-to-Run Timer (compromised run pace post-station — co-brandable with event partners). V2.5 — Heart rate during runs from wearables.

Feature 4 waliFit Calendar

The central time layer. Every workout, run, nutrition goal, streak, and AI plan is anchored to real dates. The calendar is what makes waliFit feel like a living schedule rather than a disconnected set of tools.

Daily View

- Scheduled workout or run for today (from AI plan or custom plan)
- Training day vs rest day — clearly labelled
- Nutrition targets and hydration progress
- Vitality Tree status and today's health score

Weekly View

- Training days and rest days across the full week
- Completed vs upcoming sessions
- Streak continuity visible across the week
- Nutrition consistency indicators per day

Monthly View

- Colour-coded day states: completed, rest, missed, upcoming
- Streak runs visible at a glance
- PR and milestone history browsable by date

Time-Based Linking

- AI plans map to real calendar dates on creation
- Workout and run logs timestamped and retrievable by date
- Streak logic is date and timezone-aware — late logging window until 2am local
- Rest days blocked so tree never penalises planned recovery

🔮 **Unlocks in future release:** V2 — Squad challenge deadlines appear as calendar events. V2 — Shared programme sessions appear on multiple users' calendars simultaneously.

SECTION C

Gamification

The Vitality Garden — waliFit's identity differentiator and primary retention engine

Feature 3 **Vitality Garden**

A living digital tree that reflects the user's consistency and daily habits. This is not decorative — it is waliFit's primary differentiator and the emotional core of the product. No major competitor owns anything like it.

Vitality Tree

- Central presence on the home screen — always visible
- Grows or wilts based on daily health score
- Acts as the main retention and motivation mechanism
- Five stages: Wilted → Recovering → Sprout → Growing → Full Vitality

Daily Health Score

- Hydration: 30% of score — applies every day
- Protein intake: 30% — applies every day
- Workout/run completion: 40% — only active on user-scheduled training days
- Rest days: activity pillar is neutral — tree never penalises planned recovery
- Optional: log mobility, walk, or active recovery on rest days as a bonus

Training Day vs Rest Day Logic

- User sets weekly training schedule in onboarding
- Training days: workout or run completion tracked and weighted
- Rest days: activity pillar inactive — hydration and protein still count
- Schedule adjustable week to week via the Calendar
- AI-generated plans automatically populate the training day schedule

Wilt Mechanic & Streak Freeze

- Tree health drops when goals are missed for multiple consecutive days
- Streak at-risk notification fires in the evening before the streak breaks
- Streak freeze tokens earned at milestones (7, 30, 60, 100 days)
- One freeze token protects a day without breaking the streak
- Streak is timezone-aware — calculated in user's local time always

Consistency Streak

- Daily streak count with milestone recognition
- Streak tied to tree vitality stage
- Grace period: logs accepted until 2am local time for the previous day
- Streak visible to squad members in The Arena

🔮 **Unlocks in future release:** V2 — Tree Biomes (Oak for strength, Willow for conditioning, Bamboo for hybrid). V2 — Squad Forests (all member trees rendered together in shared view). V2 — Weekly Challenges, Fitness Bingo, Reward Unlocks, Nexus Seed Economy. V2 — Female cycle phase rest day adjustment.

SECTION D

Nutrition Foundation

Simple daily protein and hydration logging — the minimum needed to make the Vitality Tree fully functional at launch

Feature 6 Simple Nutrition Logger

V1 nutrition is intentionally minimal — just enough to feed the Vitality Tree's protein and hydration pillars. Smart Fuel (full nutrition intelligence) ships in V2 once the core loop is validated.

Daily Protein Log

- User enters total protein grams for the day
- Log incrementally throughout the day (add 30g, then 40g later)
- Progress bar showing intake vs daily target
- Feeds Vitality Tree protein pillar (30% of daily score)
- Accessible from home screen with one tap

Daily Hydration Log

- Log water in glasses (default) or ml/fl oz based on units preference
- One-tap glass addition on home screen — frictionless daily interaction
- Progress ring showing intake vs daily target
- Feeds Vitality Tree hydration pillar (30% of daily score)

🔮 **Unlocks in future release:** V2 — Smart Fuel: meal text parsing, barcode scanner, food performance rating (Green/Yellow/Red), ingredient analysis. V2.5 — Vision Meal Scanner (photo → macros). V2.5 — Energy & Bloat Tracking.

SECTION E

The Arena

The competitive social heart of waliFit — Workout Squads, Run Clubs, PR Feed, and accountability

Feature 8 The Arena

One social layer, two squad flavours. Workout Squads and Run Clubs share the same infrastructure — same join code, same squad forest, same messaging, same PR feed. The difference is what the leaderboard measures.

Workout Squads

- Create or join a squad — name, join code, max 30 members (V1 cap)
- Training leaderboard: workouts completed, vitality score, streak length, weekly PRs
- Squad forest: all member trees rendered together — wilting is visible to everyone
- Group messaging for planning, check-ins, and accountability
- Deep link squad invite — share link opens the join screen directly in the app

Run Clubs

- Same infrastructure as Workout Squads — Squad with squadType='run_club'
- Optional focus distance: '5K Club', '1 Mile Club', or 'All Distances'
- Run leaderboard: best times per standard distance (1mi, 2mi, 3mi, 2K, 5K)
- SQL: SELECT MIN(value) FROM PRRecord WHERE exerciseName IN run distances AND userId IN club
- Weekly km total per member as secondary metric
- Run challenges: admin posts a distance + deadline, members submit times

The Arena Leaderboard

- Two tabs in every squad: Training tab + Run tab
- Training tab: workouts, vitality score, streaks, PRs
- Run tab: best times per distance, weekly mileage — present in all squads
- A Workout Squad member who runs still appears on the Run tab
- A Run Club member who lifts still appears on the Training tab

PR Feed

- Strength PR: '100kg squat — new all-time best'
- Run PR: '5K: 24:31 — 45 seconds faster than previous best'
- Streak milestone: '30-day streak — longest ever'
- Tree growth: 'Vitality Tree reached Full Vitality'
- Reactions: Cheer and Nudge
- All events auto-generated — users never need to post manually

Friend System & Messaging

- Friend states: None → Pending → Friends → Blocked
- DMs unlocked only after mutual friendship acceptance

- Group messaging in every squad and run club
- Text-only in V1

🔮 **Unlocks in future release:** V2 — Squad Forests (shared visual tree space). V2 — Squad Challenges (shared goals, collective streaks). V2 — Shared Programmes (run the same block together). V2 — waliFit Commons (global advice feed with Wali AI responses). V2 — Expanded feed interactions (comments, threaded replies). V2.5 — Global Arena (platform-wide competition, ranked leaderboards by location and social group).

SECTION F

UX & Utility

Rest Timer, Notifications, Offline Mode — the features users notice when they are missing

Feature 9 Rest Timer

One of the most-used features in any serious gym app. If it is missing, users notice immediately — and they leave negative reviews.

In-Set Timer

- Start timer after logging a set with one tap
- Configurable rest duration per exercise
- Background alert via scheduled expo-notifications — fires even if screen is locked
- Haptic alert when rest period ends
- Timer continues running if user navigates away from the screen
- Works fully offline — no network dependency

🔮 **Unlocks in future release:** V2 — RPE-Linked Rest Extension (high-RPE set detected → AI suggests +30-60s). V2 — Focus Alert Mode (haptic nudge if rest overruns due to phone distraction).

Feature 10 Smart Notifications

The primary re-engagement mechanism. Permission is requested immediately after the user completes their first workout — never at launch or during onboarding.

Notification Types

- Workout reminders — fires on scheduled training days at user-set time
- Hydration nudges — mid-day reminders, pauses when daily target is already hit
- Streak at-risk alerts — evening notification if daily goal not yet met
- Squad activity — PR celebrations, reactions, messages from squad members
- Cold-start coach — Wali AI's opening message delivered as a push notification

Permission Timing

- Request permission immediately after first workout completion
- Never at app launch — iOS denial rate is much higher before value is demonstrated
- Never during onboarding — user has not experienced the product yet
- In-app fallback: home screen banner for streak-at-risk if permission was denied

🔮 **Unlocks in future release:** V2 — Weekly Report Card push notification (Wali AI Monday summary). V2 — Squad challenge deadline reminders.

Feature 11 Offline Mode

Gym WiFi is unreliable. The app must work without a connection at the exact moment it is needed most — during a workout or run.

Offline Core Features

- Active workout screen — log sets, reps, weights, notes
- Rest timer — fully local, no network dependency
- Exercise library — cached on first load via MMKV
- Today's workout from the active plan — cached on open
- GPS run tracking — on-device, route cached locally
- Vitality Tree and streak display — reads from local state
- Calendar view — reads from locally cached schedule
- Protein and hydration logging — queued and synced on reconnect

Sync on Reconnect

- Workout and run logs upload automatically on reconnect
- Streak and health score recalculated server-side after sync
- No data loss if app is closed before reconnecting
- Sync status indicator visible to the user

SECTION G

Settings & Legal Compliance

Required for App Store submission — not optional, not deferrable

Feature 7 Settings Screen

Not glamorous but required. Every preference, account action, and legal link lives here. Apple will reject the app without in-app account deletion.

Profile & Preferences

- Display name and profile photo
- Units preference — kg or lbs (instant UI update)
- Daily protein target and daily water target
- Training day schedule — overrides onboarding selection
- Default rest timer duration

Notification Settings

- Per-type toggles: workout reminders, hydration nudges, streak alerts, squad activity
- Reminder time settings
- All toggleable individually — never all-or-nothing

Account Management

- Change email and password
- Export my data — downloadable JSON of all workout logs, nutrition, settings (GDPR)
- Delete my account — in-app, required by Apple. Soft-deletes immediately, hard-deletes all data in 30 days
- Confirmation screen with deletion date clearly stated

Legal & Privacy

- Privacy Policy link
- Terms of Service link
- AI Disclaimer (Wali AI is not a medical professional)
- Manage AI training data opt-out

AI Processing Disclosure

- On-device: GPS, rest timer, tree, streak, exercise library, offline logging
- Sent to Anthropic: Wali AI messages, training context, workout history
- Sent to Google: nutrition parsing, food photos, simple questions, onboarding import
- Sent to waliFit servers: workout logs, run data, squad activity, messages
- Required for 2026 App Store compliance

🔮 **Unlocks in future release:** V2.5 — Subscription management (upgrade, downgrade, cancel) added to Settings when Pro/Elite tiers launch.

V1 Complete Feature List

All features confirmed for the V1 launch build. Ordered by build priority.

#	Feature	Core Capability	Phase	Effort
1	Wali AI	Program Architect, Daily Coach Chat, Workout Adjustment, Cold-Start Message, RAG	Phase 6	1–2 weeks
2	Hybrid Performance Engine	Workout logging, custom builder, AI plan editing, exercise library, plate calc, intervals	Phase 2	2 weeks
3	Vitality Garden	Tree + health score, training/rest logic, streak + freeze, wilt mechanic	Phase 5	1 week
4	waliFit Calendar	Daily/weekly/monthly views, time-based linking, timezone-aware streak	Phase 3	1 week
5	Onboarding & Profile	Goals, units, targets, return path, multimodal import	Phase 1	1 week
6	Simple Nutrition Logger	Daily protein + water input → feeds Vitality Tree pillars	Phase 4	3 days
7	Settings Screen	Preferences, notifications, account deletion, AI disclosure	Phase 8	1 week
8	The Arena	Workout Squads, Run Clubs, leaderboards, PR feed, messaging	Phase 11	2 weeks
9	Rest Timer	In-set countdown, expo-notifications background alert, haptics	Phase 12	3 days
10	Smart Notifications	Workout/hydration/streak/squad alerts, correct permission timing	Phase 10	1 week
11	Offline Mode	MMKV local storage, offline queue, sync on reconnect	Phase 10	1 week
12	WaliRun	Foreground GPS, standard distances, run stats report, run PRs, solo stats	Phase 7	5–7 days
12a	Run Clubs	Squad extension (squadType='run_club'), run leaderboard, run challenges	Phase 11	1 day

> *Total V1 build time: 15–17 weeks solo with Claude AI assistance. 7–9 weeks with two developers. The most important instruction: build Phases 1–5 first and validate the Vitality Tree works end-to-end before touching The Arena or WaliRun.*

What Comes After V1

V1 is complete and self-contained. These are the capabilities that unlock in future releases — none are required for launch, all are designed to extend what V1 builds.

Release	What Unlocks
V2	Smart Fuel (nutrition AI, barcode scanner, food rating) · Tree Biomes · Squad Forests · RPE-Linked Rest Timer · Female Training Considerations · Progress & Analytics · Body Metrics · Background GPS · Performance Dashboard · waliFit Commons (global advice feed) · Home Screen Widget · Referral System
V2.5	Global Arena (platform-wide competition, co-brandable with event partners) · Adaptive AI (programme evolution, deload detection) · Station-to-Run Timer (hybrid event prep) · Vision Meal Scanner · Wearable Integration (Apple Watch, Garmin, HRV coaching) · Subscription tiers (Pro + Elite via RevenueCat)
V3	Bar Path Tracking · Velocity Loss Monitoring · AI Form Coach — computer vision layer leveraging mechatronics background, waliFit's long-term technical moat
